

# Steroids and Hormones

## For Qualification and Quantitation

Steroids and hormones play vital roles in the regulation of a diverse array of cellular functions and physiological processes. These pertain to development, reproduction, homeostasis, and metabolism, among others. Accurate quantification of this compound class is essential for basic and clinical translation research. This can be achieved by spiking an isotopically labeled steroid standard(s) or mix into a sample of interest, such as plasma or urine, with measurement performed by an MS- or NMR-based approach.

**CIL offers a variety of stable isotope-labeled and unlabeled steroid and hormone standards and mixes.** These are available in different labeling patterns in their neat and/or solution forms. See [isotope.com](http://isotope.com) for a complete listing.
